

Loom data flow — type split

Shared pipeline until we know what a document is. Then Loom's router fans out: lesson plans, quizzes, and everything else get different workflows. Paths rejoin for unit reports and Drive.

START

CODE

1. Sources land

Drop curriculum into `projects/<id>/sources/` — mixed types, one pile.

EXTRACT

CODE

2. Text extraction

`doc_extract.py` — still shared for every file.

ORGANIZE

MODEL

3. Ingest

`ingest.py` — group into units + day calendars. Types not routed yet.

MAP YEAR

CODE

4. Rollup

`rollup.py` — pacing / year map from calendars.

BREAK APART

MODEL

5. Layer 0 — decompose + classify

Model extracts cited elements *and* we know the document's pedagogical type (lesson plan, quiz, exit ticket, worksheet, slides, ...).

- Ledger: `layer0/ledger.json`
- **This is the last shared step before Loom splits**

LOOM

PLANNED / BUILDING

6. Router — figure out what it is, then split

`route.py` reads classification → picks a workflow. Same document never gets a one-size-fits-all analysis after this point. Unknown types → general path + feedback log.

PATH A · LESSON PLAN

Lesson plan workflow

1. Layer 1 place on calendar (shared idea, lesson-aware roles)

2. Hunter / CTAT checklist Layer 2
3. **Model assigns excerpts** → **Hunter fields** (fix for fill drift)
4. Emit LESSON-PLAN.md / .pdf structure plate

Out: lesson completeness + filled Hunter sheet

PATH B · QUIZ / ASSESSMENT

Quiz workflow

1. Check answer key present?
2. Item coverage vs unit TEKS / learning targets
3. Formative vs summative role on the day grid
4. No Hunter plate — assessment-shaped findings

Out: quiz audit rows for teacher packet

PATH C · EVERYTHING ELSE

General pass

1. Slides, worksheets, rubrics, flyers, unknown...
2. Current generic Layer 1–2 style analysis
3. Log unknown types → `_loom_feedback.yaml`
4. Later: promote hot patterns to their own workflow

Out: generic findings + feedback for growth

↓ PATHS REJOIN PER UNIT ↓

UNIT VIEW

CODE

MODEL

DELIVERABLE

7. Unit assemble — reports + education plates

Findings from all three paths merge into the unit folder.

- `TEACHER-PACKET` — auditor punch list (hybrid)
- `UNIT-PLAN` — NW ISD macro inventory (discovery fill)
- `LESSON-PLAN` — only from Path A (Hunter), once model placement ships

SHIP

CODE

DELIVERABLE

8. Drive push

Per-unit PDFs + files. Add `LESSON-PLAN.pdf` when Path A fill is trusted.

Where model fills the lesson-plan sheet: on Path A, after the document is typed as *lesson plan* — not on the shared trunk, and not on quiz/general. That keeps quiz analysis assessment-shaped and stops keyword drift from treating every chunk like a Hunter step.
